

Israeli prime minister Benjamin Netanyahu, scientist Max Tegmark from MIT and Greg Brockman, president and co-founder of OpenAI, participated in the roundtable conversation with the Elon Musk, SpaceX and Tesla founder, chairman and CEO.

Date: September 18th, 2023.

Talk first started between Musk and Netanyahu with question how do we know that this is not a deep fake (artificial production)? They answered: "don't know" and "impossible".

Netanyahu touched on a nuclear threat which is actually not controlled by treaties but mutual deterrence or "MAD" - mutually assured destruction. Two things are crucial for making nuclear weapon: scientists and ingredients (Uranium, Plutonium). Tracking purchase of a compounds is essential.

AI can be both a blessing and a curse: while many fields benefit from it like agriculture, traffic and health there is also a risk of AI driven crime syndicates, wars and rogue states or runaway corporations misuse.

Speaking about democracy, Netanyahu emphasized an importance of the balance between judicial, legislative and executive branch of a government.

It is not "we an enlightened people" but "we the people" said Netanyahu mentioning Socrates, Plato, Locke, Montesquieu, Hamilton and Madison. Subsequently, he remarked "who reads today" and "people read tweets". Hence, it is "we the people" who don't read or read tweets"! Good luck with that. I personally prefer to be led by an enlightened one.

Israel transformed from semi-socialist economy to vibrant free market.

For Netanyahu, boring heaven is better than interesting hell. I could agree but why not making an interesting heaven instead?

Elon Musk favourite books are Douglas Adams's "Hitchhiker's guide to the galaxy", Tolkien's "The Lord of the Rings" and works of Isaac Asimov. He read Encyclopedia out of desperation.

Netanyahu`s father historian advised him to be educated.

After this diverging introduction they were joined by Tegmark and Brockman.

Elon Musk spoke about AI medical assistance for injured people and connecting brain to a digital interface. He pointed that we must improve human bandwidth which is mere hundreds of bits per second. Compared to a modern computer which has speed of trillions of bits per second humans resemble a trees.

Benjamin Netanyahu will focus his attention in the following months to the legislative concerning AI.

Max Tegmark is also a president of the Future Life Institute. He loves the beauty of a choices.

Greg Brockman started OpenAI project in 2015/16 from his apartment. He referred to a book "The Singularity Is Near: When Humans Transcend Biology" written by Ray Kurzweil who predicts that in 2029. computers will achieve human level of intelligence and pass the Turing test. In 2030`s we can expect a neuralink or implementation of an electronical chips into the human brain. In 2045. full merge, singularity, will occur.
